

### III. CLAIM AMENDMENTS

1.-31. (Cancelled)

32. (New) A first mobile terminal for trading a digital collectible card associated with a user of the first mobile terminal, the first mobile terminal comprising:

means for detecting whether a second mobile terminal is available for trading the digital collectable card; and

a short-range wireless communication transceiver for directly communicating with the second mobile terminal for trading the digital collectable card.

33. (New) The first mobile terminal of claim 32, wherein the short-range wireless communication transceiver comprises a bluetooth transceiver.

34. (New) The first mobile terminal of claim 32, wherein the short-range wireless communication transceiver is operable to communicate within an operational low power radio range.

35. (New) The first mobile terminal of claim 32, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting whether the second mobile terminal has a digital collectable card trading capability.

36. (New) The first mobile terminal of claim 32, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting the availability of a particular digital collectable card.

37. (New) The first mobile terminal of claim 32, further comprising a means for determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

38. (New) The first mobile terminal of claim 32, further comprising a means for transferring confirmation and registration messages to a server administering the digital collectible card via a mobile communications network.

39. (New) The first mobile terminal of claim 32, further comprising a means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal.

40. (New) The first mobile terminal of claim 39, wherein the means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal comprises a short-range wireless communication between the first and second mobile terminals.

41. (New) The first mobile terminal of claim 32, further comprising a means for determining whether another digital collectable card is available.

42. (New) The first mobile terminal of claim 32, wherein the first and second mobile terminals are operable to exchange messages proposing a meeting to trade the digital collectable card.

43. (New) A method for trading a digital collectible card associated with a user of a first mobile terminal, the method comprising:

detecting whether a first mobile terminal is in the vicinity of a second mobile terminal;

communicating within an operational range of short range wireless communications directly between the first and second terminals for trading the digital collectable card.

44. (New) The method of claim 43, further comprising detecting whether the second mobile terminal has a digital collectable card trading capability.

45. (New) The method of claim 43, further comprising detecting the availability of a particular digital collectable card.

46. (New) The method of claim 43, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

47. (New) The method of claim 43, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises exchanging a short-range wireless communication between the first and second mobile terminals.

48. (New) The method of claim 43, further comprising transferring confirmation and registration messages to a server administering the digital collectible card via a mobile communications network.

49. (New) The method of claim 43, further comprising exchanging messages proposing a meeting to trade the digital collectable card.

50. (New) A system for trading a plurality of digital collectable cards comprising:

a first mobile terminal having a user associated with a first card of the plurality of digital collectable cards;

a second mobile having a second user, the second mobile terminal being capable for associating the second user with the first card, the second mobile terminal operable to determine if the first mobile terminal is in the vicinity of the second mobile terminal;

wherein the first and second mobile terminals both comprise a short-range wireless communication transceiver for directly communicating between the first and second mobile terminals for trading the first card.

51. (New) The system of claim 50, wherein the short-range wireless communication transceivers comprise bluetooth transceivers.

52. (New) The system of claim 50, further comprising:

a mobile communication network; and

a means for determining whether the first and second mobile terminals are in the same cell of the mobile communication network.
